

# Operating Instructions

## Series FE9000 Fuel Hose Reels

Low Pressure Model Numbers:

FE9200 OLP                      FE9300 OLP  
FE9350 OLP                      FE9400 OLP  
FE9450 OLP

### Dimensions

### SAFETY

1. Do not use reel at higher pressures or temperatures than listed on the back of this bulletin.
2. Remove all spring tension before beginning disassembly process.
3. Reel spring motor case is permanently sealed. Any attempt to remove the spring motor may cause serious injury.

#### INSTALLATION:

The swivel union is packed separately in the reel carton, use teflon tape to assure a satisfactory seal. A flexible hose connection must be used between the hose reel inlet and the source of supply to prevent possible misalignment and binding. Non flexible connections will void the warranty, pressure rating of inlet hose must be equal to or more than the pressure rating of the reel. Consult Reelcraft for proper spring when installing reels above 16 ft.

#### LUBRICATION:

Hose reel spring and bearings are factory lubricated and require no further lubrication.

#### REPLACING HOSE:

1. Wind spool flange clockwise-facing swivel-until spring is tight.
2. Back off three turns and latch.
3. Insert hose through roller guide.
4. Connect hose fitting to female outlet ell.

#### ADJUSTMENTS:

To adjust spring tension, add or remove wraps of hose from the spool, one wrap at a time until desired tension is obtained.

#### REPAIRS:

Extensive repairs should be performed only by an authorized serviceman or factory to avoid damage which may void your warranty. Remove all spring tension before beginning disassembly process.

#### MODIFICATION:

Hose latching mechanism can be removed for constant tension applications.

Form# 613-193A Rev: 4/2020
